

Webmasters Report - February 16, 2023

The division's web site <https://seacoastnmra.org> has been updated with all reports, documents, photos and/or links available at this writing, which includes the Switch Tower, NER Coupler, NMRA Turntable, links to Great Falls Model Railroad Club publications, Board of Director's meetings, lots of presentations and model railroading information and connections to NMRA web sites worldwide.

In terms of metrics, the current web site now hosts 4,459 files which are largely composed [+80%] of viewable documents and images, while the remainder of the files are computer coded templates, style sheets, file folders and coding. The previous web site administered by the Content Management System [CMS] "Joomla" was comprised of 31,145 files, of which 89% was computer code. The current web site has three times the viewable content as was before and 30 times less computer code.

If you wish to add content to the web site or have ideas to improve it, please feel free to call or email me to discuss your proposal. Routine updates to the web site are authorized by the President and sent to me via email for posting, while enhancements or adding other content materials may need board approval.

Over the past several months the web site has gotten a bit out of date due to issues relating to me losing my new \$2K HP laptop computer I purchased last August and was subject to month's long repairs. My back-up computer was unsuited to the task. Thus, posting to the web site had been deferred due largely to that issue.

With that in the rear view mirror, the following nineteen (19) content items have recently been added:

"Home" Page - <https://seacoastnmra.com/home.php>

Main Body:

Winter 2023 President's Letter

"Meetings/Reports" Page - <https://seacoastnmra.com/reports.php>
